

Building the Company B M3 75mm SPM

The interior storage, MG mounts, raised floor, gun pedestal, rear storage, dashboard, and windshield are positioned and glued as shown above. Make sure the notch in the windshield faces up. The windshield can be installed either up as shown or folded down.

The gun barrel and mount are positioned as shown. The barrel would rest in the windshield notch when traveling and would be elevated above the groove when firing. Attach the gun shield so the shield corners align with second groove in the side.

Gas cans can be added anywhere but the picture shows a common position. Make sure the springs are to the rear when attaching the tracks.

The model assembles well will super glue. I would suggest reinforcing the bond on the front axle and also under the front bumper with epoxy.
