

Company B ZPU-2 Assembly

The ZPU-2 comes in two versions; either the Vehicle mount or the Standard which can be built either towed or deployed. Parts differ slightly between the two.

Step 1. Glue #4 the frames into the slots of #2 the base. The #1 gun goes in the slots in the frame. Do not glue if you want it to elevate and depress.

Step 2. Glue #5 the sight and controller. The pins sit in holes on the rear of the frame. If you want it to elevate and depress do not glue at the arrow.

Step 3. If you are building the towed version skip ahead to step 5. If you are building the vehicle mount version skip ahead to step 6.

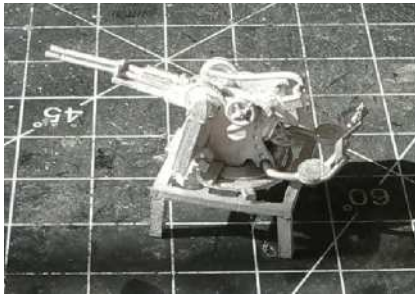

Glue the seats in the holes in the rear of the frame. If you have purchased the crew glue them instead.

Step 4. Glue #8 axles in the holes in the lower frame and glue on the wheels. You are done.

Step 5. Towed version. Glue the folded seats into the hole in the lower frame and position as shown. Then add the axles and wheels as in Step 4. Use the #10 tow arm to attach the gun to your vehicle.

Step 6. Vehicle Mount. Add the seats or crew as in Step 3. Glue the base to the steel frame #6.
